Note about Warranty : Our goal is to custom build and provide you with the most stable computer out of what we deem to be today's best components from those priced at a reasonable level. The objective is to build such a sturdy and stable computer whereby one does not need to rely on repair. However, in the event that there is a need for repair, your warranty options are to have the system taken in to the service center which will typically take between two to three days, or at a 35% discounted billable service rate, you can have Michael come out to perform an onsite repair. If your computer is in need of repair and you would like for it to be serviced by the service center, please give Josh Hobbs a call at 512-351-5762 so that he can assist you. If you would like Michael to come out, please contact him at 214-566-4085.
